Empathy Map Canvas – Import Data Using Transform Maps (Spreadsheet)

An empathy map is a simple and easy-to-understand visual tool that captures the **user's experience, behaviours, needs, and challenges** while importing spreadsheet data into ServiceNow.

It helps the team understand the difficulties users face during the **data import and transformation process**, such as incorrect field mapping, data errors, duplicate records, and manual data entry.

Creating an effective **Import Data Using Transform Maps (Spreadsheet)** solution requires understanding the user's perspective, goals, and challenges. The empathy mapping process helps the team identify user needs and design a **simple, accurate, and efficient method for importing spreadsheet data into ServiceNow using Import Sets and Transform Maps**.

Example:
